LIST OF ABBREVIATIONS

The abbreviations used in this document are given in Table 1.

Table 1. Abbreviations and definitions

Abbreviation	Definition
OS	Operating system
MyOffice software	MyOffice Text, MyOffice Spreadsheet, MyOffice Presentation applications

1 About

1.1 General information

This guide describes the steps for installing, updating, and uninstalling the following desktop applications under Linux, Windows, and macOS operating systems:

- MyOffice Text is an editor for fast and convenient creation and formatting of text documents of any complexity.
- MyOffice Spreadsheet is an editor for creating spreadsheets, conducting calculations, analyzing data, generating summary reports, and automating data processing using macros.
- MyOffice Presentation is an application for creating, designing, and displaying presentations.

These applications are part of the following products:

- MyOffice Professional 2
- MyOffice Professional 3
- MyOffice Standard 3

For a detailed description of the features of these applications, please refer to your product-specific Feature list.

1.2 System requirements

Product (software installer)	Hardware requirements		Software requirements
	Minimal	Recommended

1.3 Limitations

Supported interface languages:

- English
- French
- Russian

If you want to install MyOffice applications, the OS interface language will be defined by the following:

- In Windows OS: by the regional format.
- In Linux OS: by the main language of the OS interface.
- In macOS: by the preferred language of the OS interface.

2 Install and update

2.1 Software installers

You can find the list of MyOffice software installers in Table 2.

Table 2. List of MyOffice software installers

OS	Software installers
Windows	MyOffice_Standard_Documents_Win_3.2.0_x86_64.msi
Linux	<ol style="list-style-type: none">1. myoffice-standard-documents-3.2-159.x86_64.rpm2. myoffice-standard-documents_3.2-159_amd64.deb
macOS	MyOffice_Standard_Documents_macOS_3.2.0_x86_64.dmg

2.2 Install and update on Windows OS

To install or update MyOffice software on Windows OS, place the software installer in a local folder and start its execution by double-clicking.

If Windows prompts you to confirm the installation, enter the OS administrator password.

In the welcome window of the Setup Wizard (see Figure 1), click **Next**.

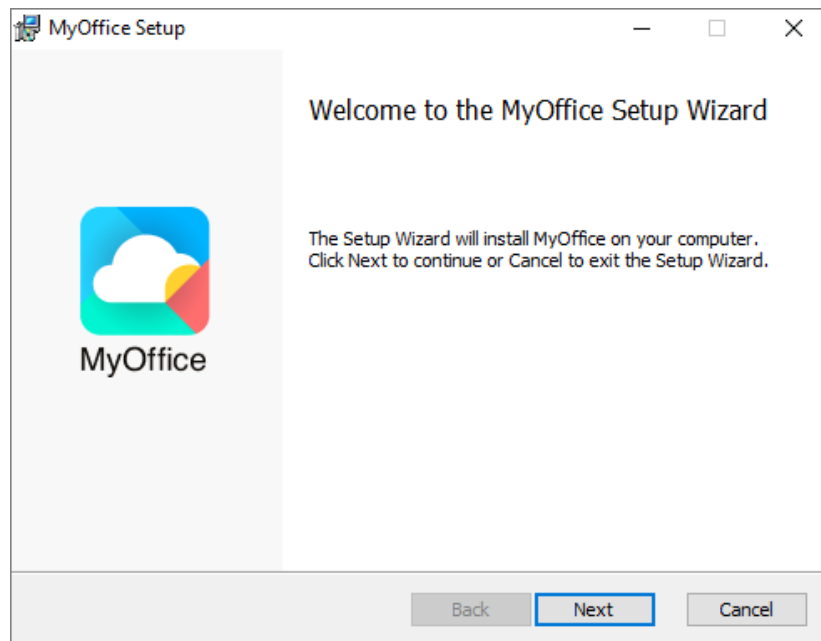

Figure 1. Setup Wizard welcome window

In the **Destination Folder** window (see Figure 2), specify the folder where you want to install MyOffice applications or keep the default folder.

To go to the next window, click **Next**.

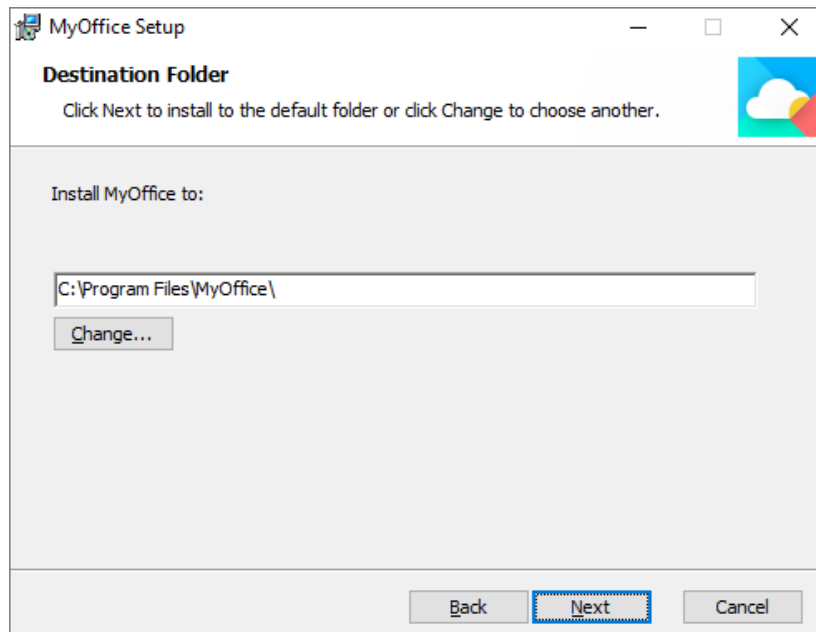

Figure 2. Destination Folder window

In the **Ready to install MyOffice** window (see Figure 3), click **Install**.

Figure 3. Ready to setup MyOffice window

Wait until all the components of MyOffice are installed (see Figure 4).

Figure 4. MyOffice Setup window

In the **Completed the MyOffice Setup Wizard** window (see Figure 5), click **Finish**.

Figure 5. Completed MyOffice Setup Wizard window

2.3 Install and update on Linux OS

The installation and update of MyOffice software on Linux is done using a pre-installed program with a graphical interface designed to install rpm or deb packages. To install or update MyOffice software, you must have an administrator password.

 This installation or update method is not supported in Astra Linux Special Edition Smolensk 1.7 OS. To install the MyOffice software on this operating system, contact your system administrator for assistance.

In this example, MyOffice software will be installed in the Alt Workstation 10.0 operating system.

To install or update the software, follow these steps:

1. Place the MyOffice rpm package MyOffice suite the local folder.
2. Double-click with the mouse to run the file.
3. In the Install RPM window, click **Install** (see Figure 6).

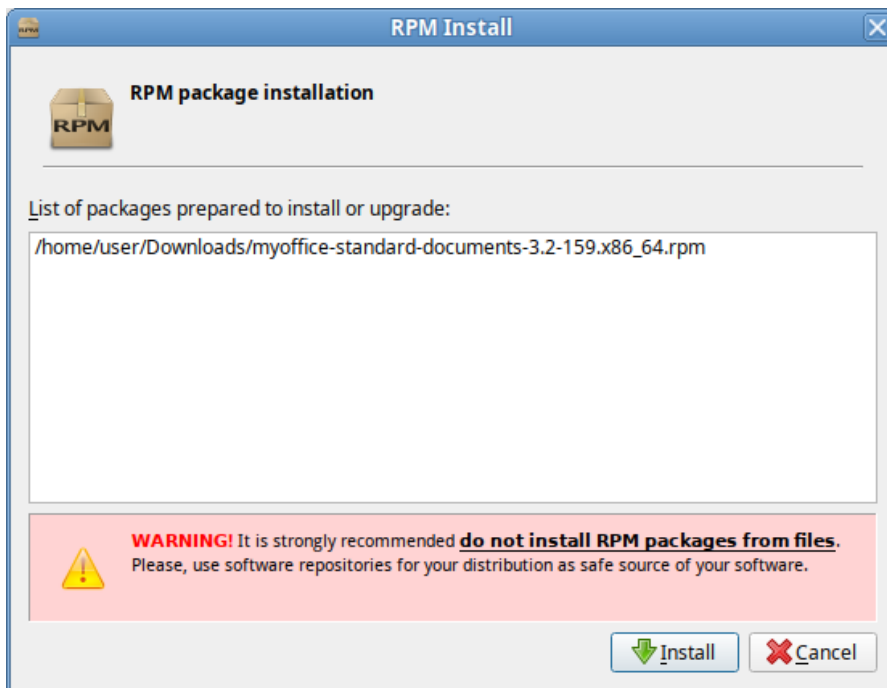

Figure 6. Install RPM window

4. In the login window, specify the administrator password and click **OK** (see Figure 7).

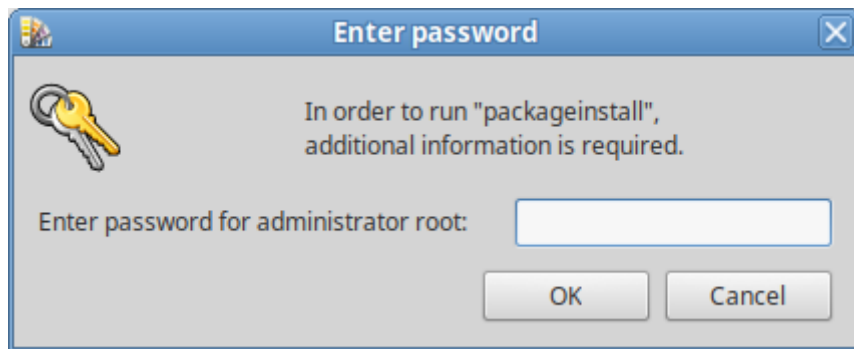

Figure 7. Log in window

5. Wait until the package installation is complete and click **Exit** (see Figure 8).

Figure 8. Package installation complete

2.4 Install and update on macOS

To install or update MyOffice software on macOS, follow these steps:

1. Place the .dmg file in a local folder.
2. Double-click the file to mount the disk image.

3. In the window shown in Figure 9, copy MyOffice Text, MyOffice Spreadsheet and MyOffice Presentation applications into the **Applications** folder. To do this, drag the application shortcuts to the **Applications** folder by holding the left mouse button down.

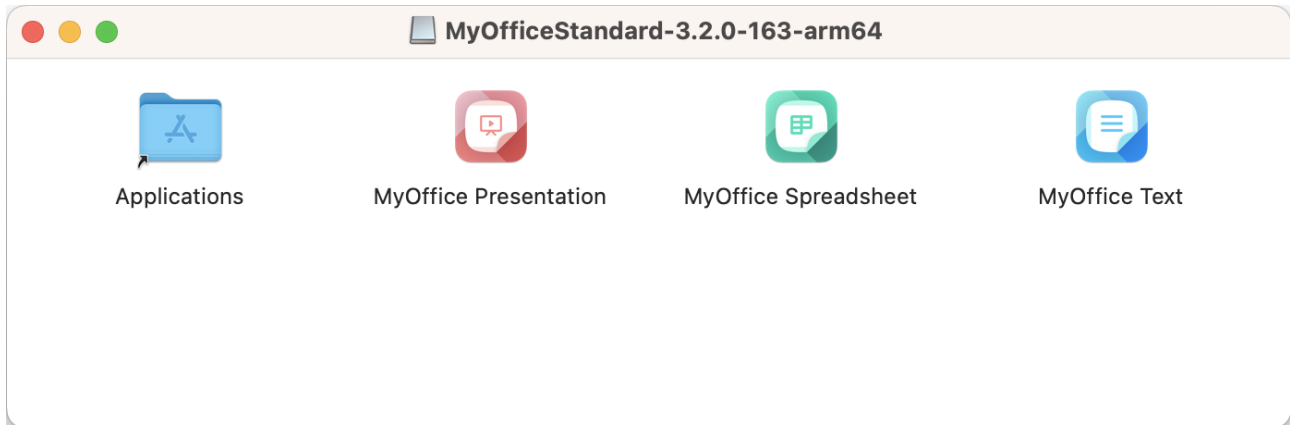

Figure 9. Virtual disk

4. If you update MyOffice software, confirm that you want to replace MyOffice Text, MyOffice Spreadsheet and MyOffice Presentation applications (see Figure 10) in the **Applications** folder.

Figure 10. Request to confirm application replacement based on the example of MyOffice Presentation

5. Wait until the applications are copied (see Figure 11).

Figure 11. Copy the applications

6. Close the window with the contents of the virtual disk.

7. Dismount the disc image using one of the following methods:

- In the Finder, click  to the right of the virtual disk name (see Figure 12).

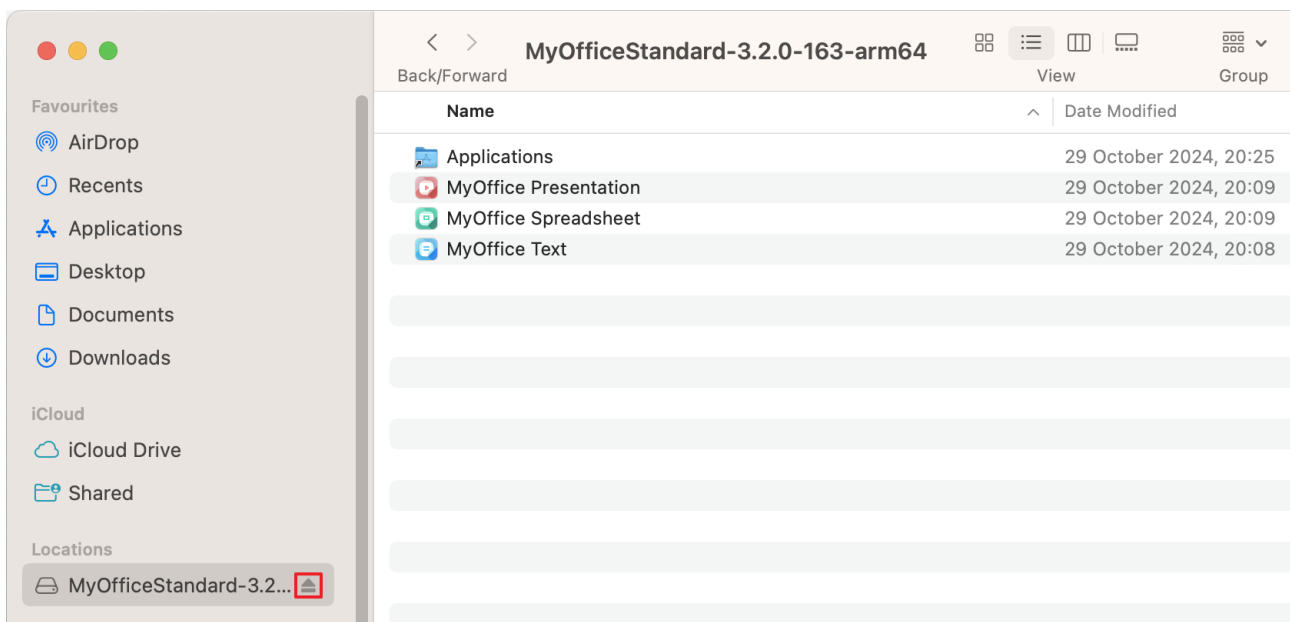

Figure 12. Button to dismount the disk image

- On the desktop, move the virtual disk to the **Trash** by holding the left mouse button down (see Figure 13).

Figure 13. Move a virtual disk to Trash

- Press **⌘+E**.

3 Verify successful installation

3.1 Verify successful installation on Windows OS

If you [installed](#) MyOffice applications on Windows OS and you see the shortcuts shown on Figure 14 and in the main menu of the OS (see Figure 15) and, when clicked, the corresponding applications open correctly without any error messages, that means you have successfully installed MyOffice software.

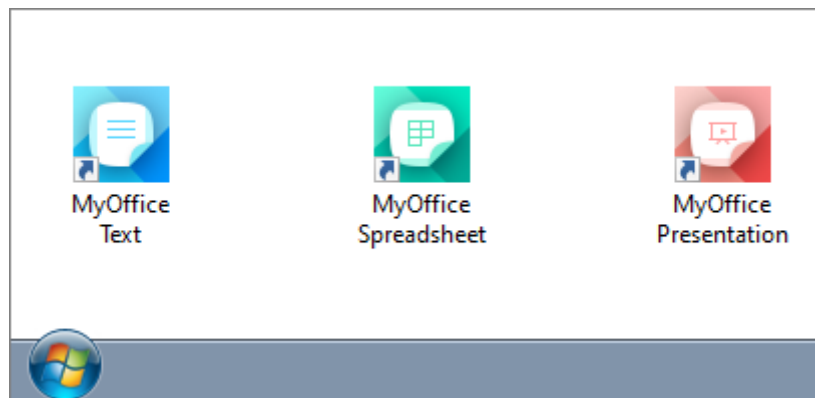

Figure 14. MyOffice applications Windows OS desktop shortcuts

Figure 15. MyOffice application shortcuts in the Windows main menu

3.2 Verify successful installation on Linux OS

If you [installed](#) MyOffice applications on Linux OS, the shortcuts are displayed in the OS Application menu (see Figure 16), and the respective applications are launched without any error messages, that means you have successfully installed MyOffice software.

Figure 16. MyOffice applications Linux OS desktop shortcuts

3.3 Verify successful installation on macOS

If you [installed](#) MyOffice applications on macOS, the icons are displayed in the Launchpad (see Figure 17), and the respective applications are launched without any error messages, that means you have successfully installed MyOffice software.

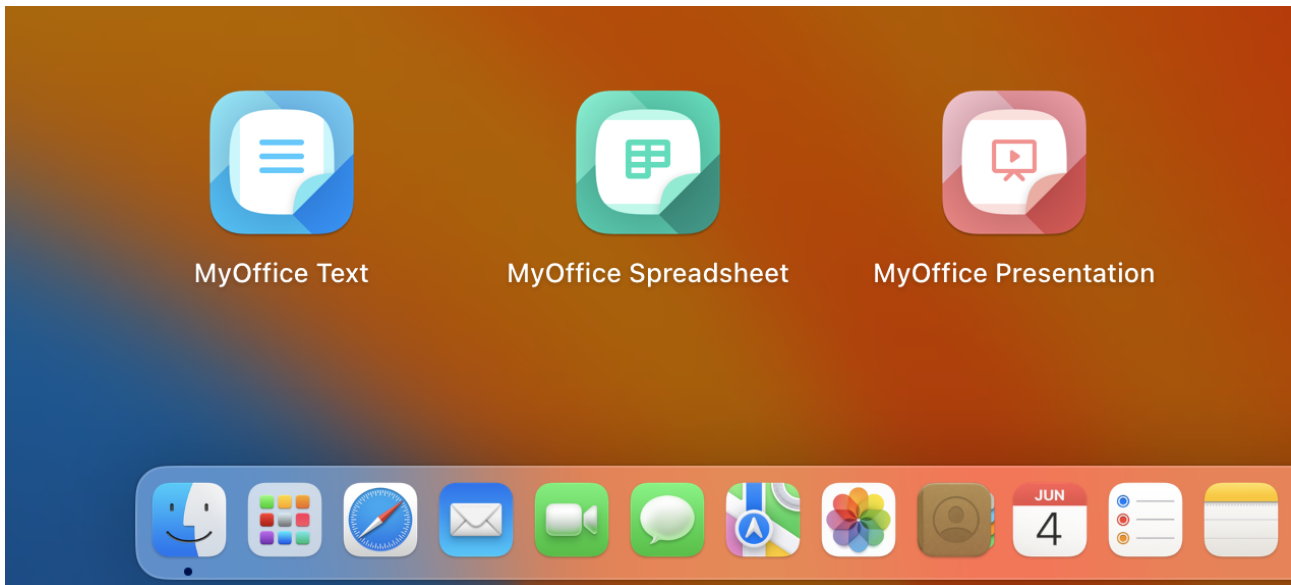

Figure 17. Application icons in Launchpad

4 Uninstall

4.1 Uninstall the software on Windows OS

Before uninstalling, close all applications from the MyOffice suite.

You can uninstall MyOffice software using the Windows main menu or control panel. Here's an example of how to uninstall the applications in Windows 10.

To uninstall MyOffice software using the Windows main menu, follow the steps below:

1. Open the Start menu in Windows OS.
2. Scroll down the list of installed applications until you reach the letter **M**.
3. Expand the **MyOffice** folder (see Figure 18).

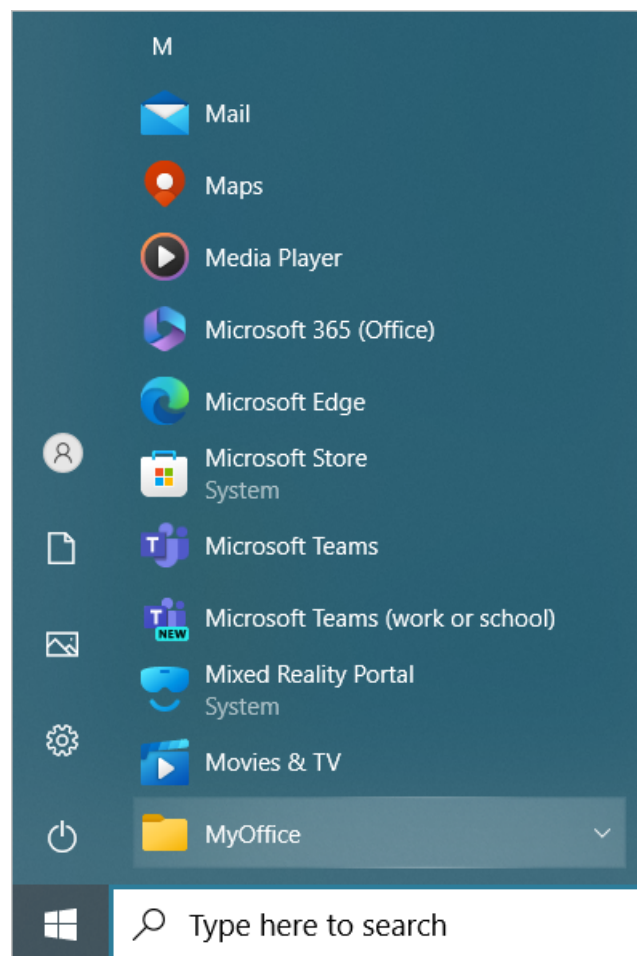

Figure 18. MyOffice folder

4. Select **Uninstall MyOffice** (see Figure 19).

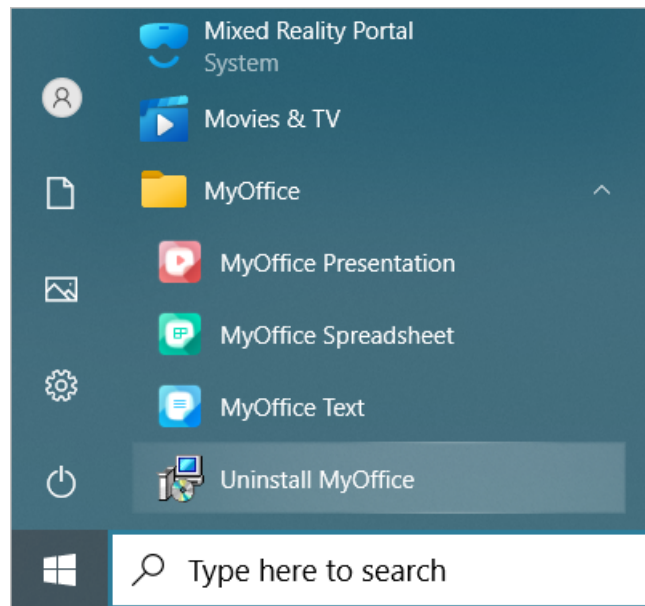

Figure 19. Running the Windows Installer

5. In the **Windows Installer** dialog box, click **Yes** (see Figure 20).

Figure 20. Windows Installer dialog box

6. Wait until all MyOffice software components are uninstalled (see Figure 21).

Figure 21. Uninstall components

To uninstall the MyOffice software using the Windows Control Panel, follow the steps below:

1. Open the Control Panel.
2. In the **Control Panel** window, select **Programs and Features**.
3. In the list of programs and features, select **MyOffice** and click **Uninstall** (see Figure 22).

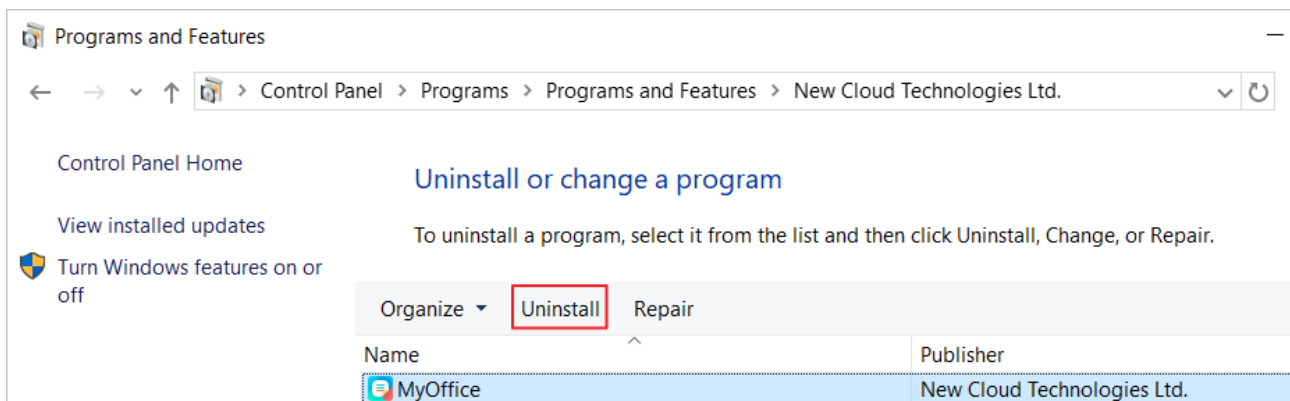

Figure 22. Uninstall or change a program window

4. In the **Programs and Features** dialog box, click **Yes** (see Figure 23).

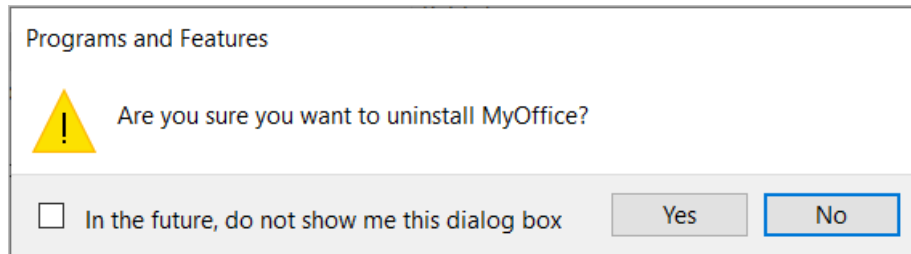

Figure 23. Programs and Features dialog box

5. Wait until all MyOffice software components are uninstalled (see Figure 21).

4.2 Uninstall the software on Linux OS

Before uninstalling, close all applications from the MyOffice suite.

You can uninstall the MyOffice software on Linux OS using the pre-installed GUI program for package management. To uninstall the software, you are required to have an administrator password.

Here's an example of an uninstall using Synaptic software on the Alt Workstation 10.0 OS.

To uninstall MyOffice software, follow the steps below:

1. Launch the Synaptic software.
2. In the login window, enter the administrator password.
3. In the Synaptic software window, in the list on the left, select the **Applications/Editors** section (see Figure 24).
4. In the list on the right, select the **myoffice-standard-documents** package.
5. Open the context menu of the package by right-clicking and run the **Mark for Removal** command.

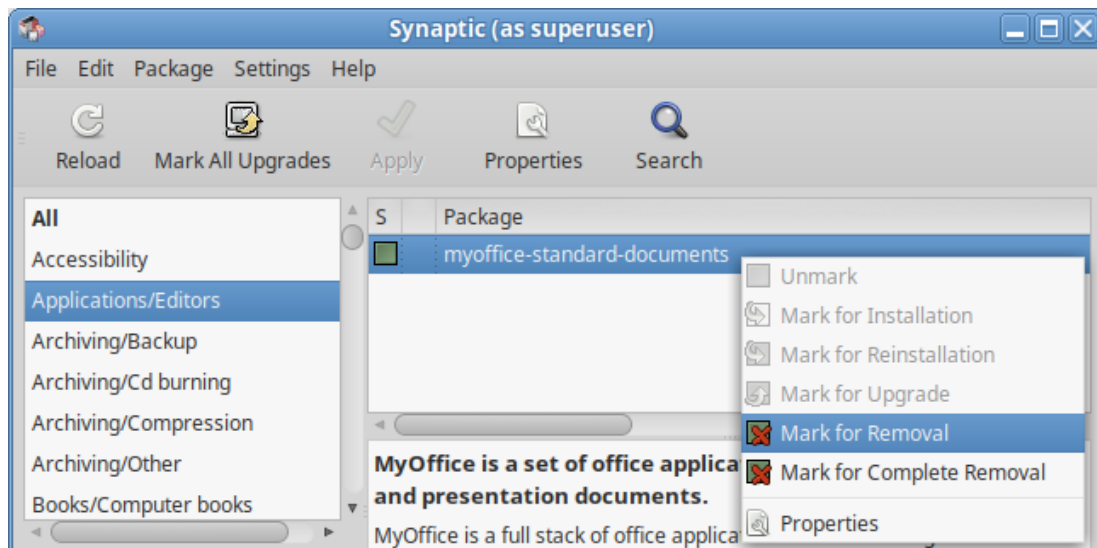

Figure 24. Select a package to be deleted

6. Click **Apply** (see Figure 25).

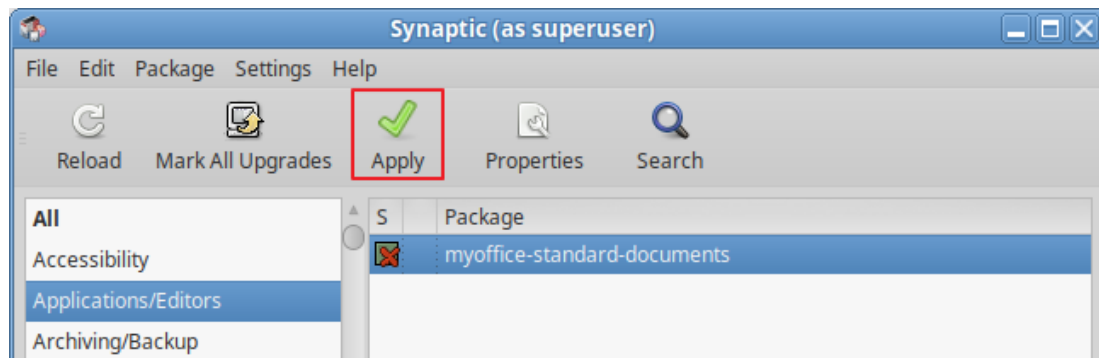

Figure 25. Confirmation of operation selection

7. In the **Summary** window, click **Apply** (see Figure 26).

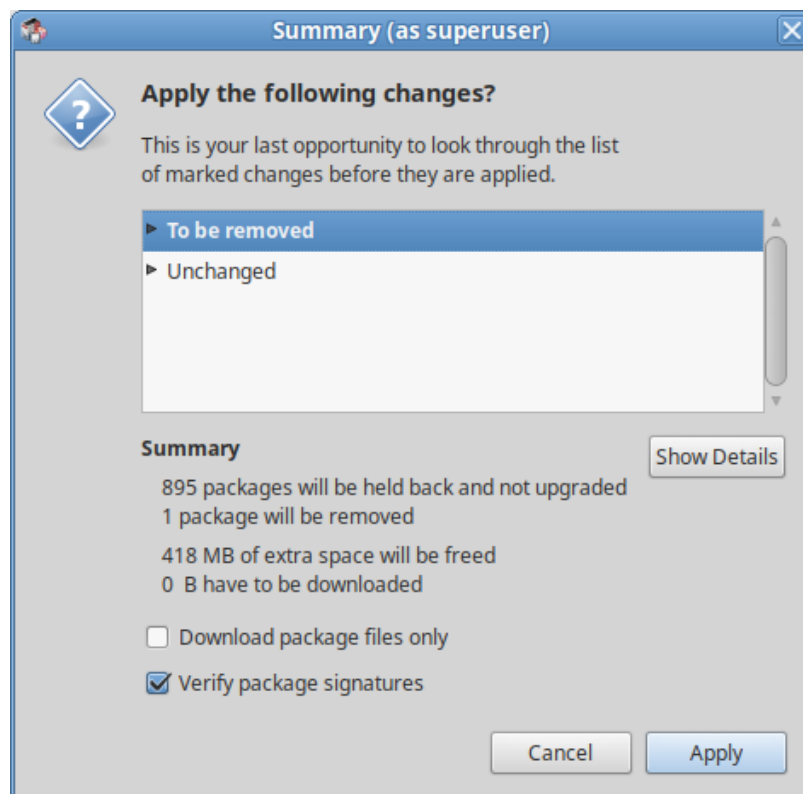

Figure 26. Summary window

8. In the **Package Manager output** window, click **Close** (see Figure 27).

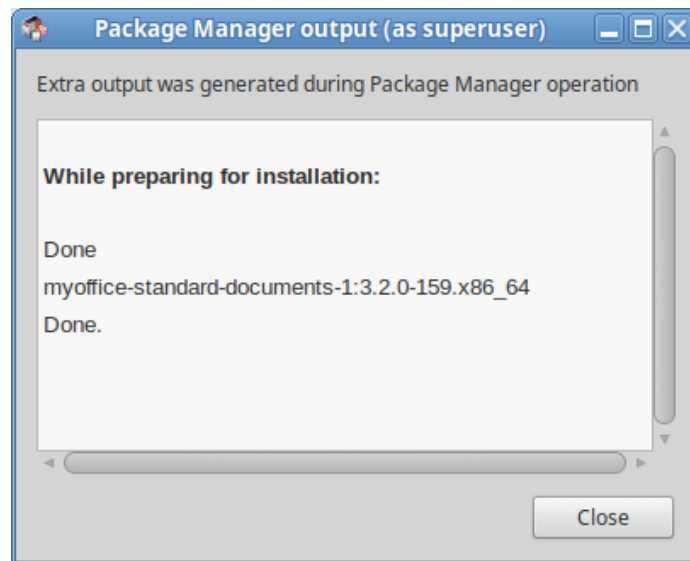

Figure 27. Package Manager output window

9. Close the Synaptic software.

4.3 Uninstall the software on macOS

Before uninstalling, close all applications from the MyOffice suite.

You can uninstall the MyOffice software on macOS using the Finder. To do this, proceed as follows:

1. Open the Finder (see Figure 28).
2. In the Sidebar, select **Applications**.
3. In the **Applications** folder, select MyOffice Text, MyOffice Spreadsheet and MyOffice Presentation applications.
4. Delete the applications in one of the following ways:
 - At the top of the Finder window, click  **Action** and select **Move to Bin** from the drop-down list.

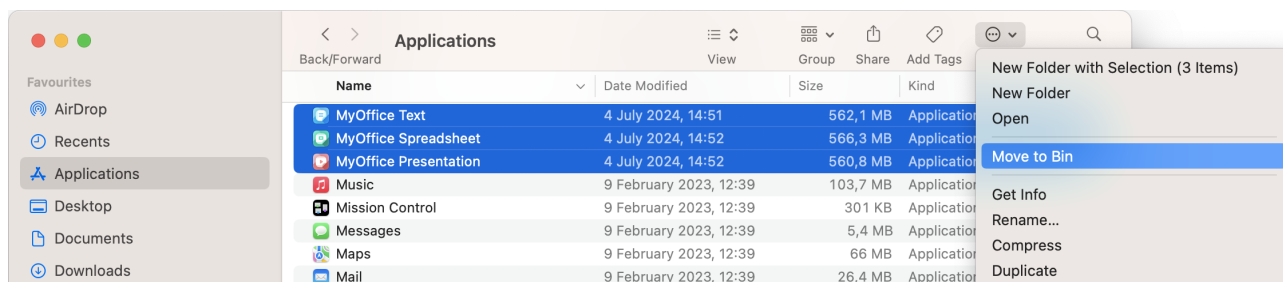

Figure 28. Action button

- Right-click to open the context menu and run the **Move to Bin** command (see Figure 29).

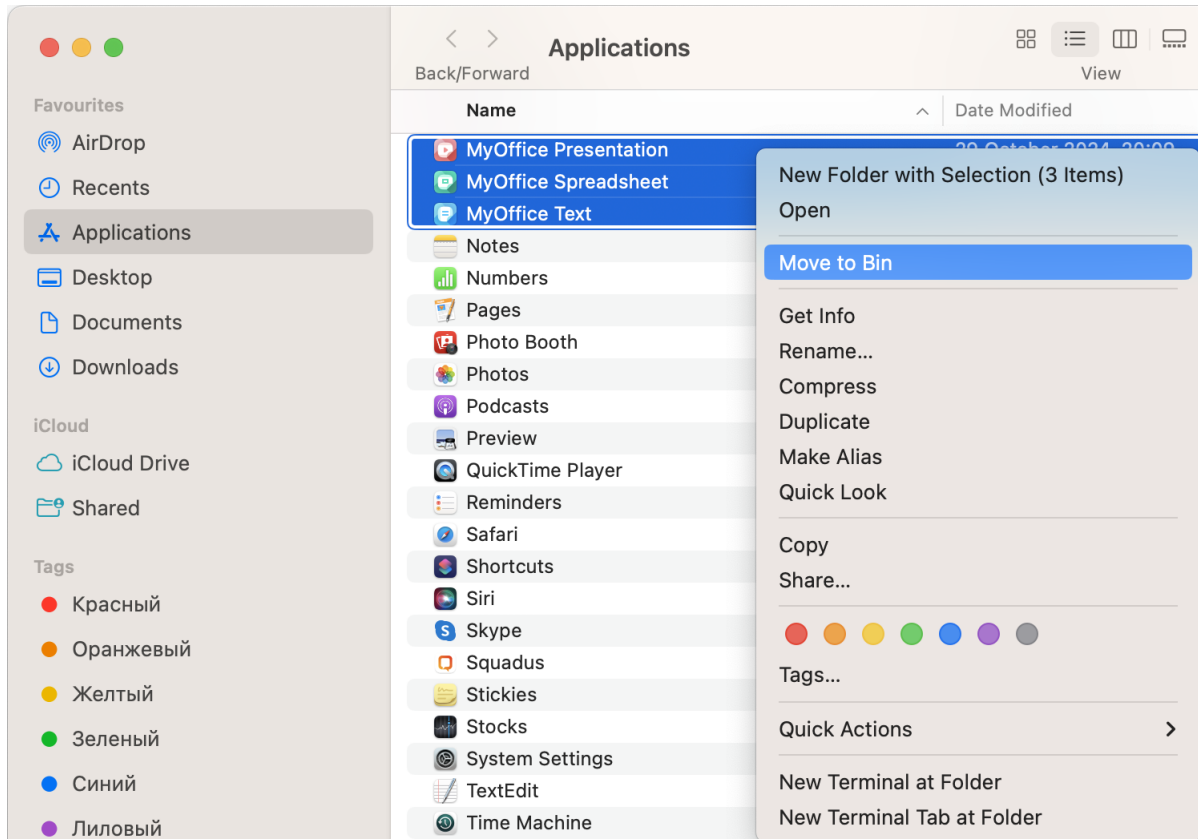

Figure 29. Context menu

- Hold the left mouse button down and move the applications to the **Bin** in the Dock.
